Air Voids – No Need To Fail

Question

How many people here think compliance with air void tolerances within the SROH is achievable 100% of the time?

How about 99% of the time?

All we need to do is squash a given depth of material a given amount.

Is it due to

- Materials
- Plant and Equipment
- Weather
- Workmanship
- Something Mysterious

I say failure comes from 4 things

- Lack of Knowledge
- Lack of Understanding
- Training

I did say 4 things

Management

- Is it due to
 1. Materials
 2. Plant and Equipment
 3. Weather
 4. Workmanship

Air Voids – No Need To Fail

Air Voids – No Need To Fail

Air Voids – No Need To Fail
